Bamboo Decking by Moso

BAMBOO X-TREME™

EXTRAORDINARY, BEAUTIFUL APPEARANCE

Ecology

- Bamboo is not a tree but a grass. Bamboo grows very fast: within 5 years the stems are ready to harvest. After harvesting the mother plant continues to develop new shoots from the root system, this is contrary to tropical hardwoods: they can take up to 100 years of growth after which the tree is felled and thus no longer contributes to the ecological system. Therefore bamboo is a rapidly renewable and very ecological raw material.

Durable

- Durability class 1: (more than 25 years of use)
- Fungus resistance class 0: (no fungus development)

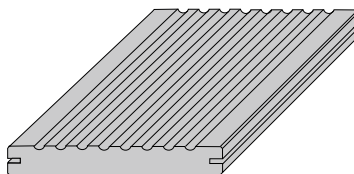

Stable

- High stability: no torsion
- Extremely hard: the hardest wood available

Convenient

- Fixed length: easy to install
- Tongue/groove on head side: no gap needed
- Usable on both sides: ribbed and flat
- Fast installation: screw down or with clips
- Prefinished: factory finished or unfinished available
- Maintenance: easy maintenance with existing decking oils and saturators
- Patented and guaranteed by MOSO®
